

Motivation Letter – MSc User Experience Design

I am writing to express my strong motivation to join the MSc User Experience Design programme at Birmingham City University. With a background in Software Engineering and over three years of experience as a Full Stack JavaScript Developer, I have built a solid technical foundation. However, as I progressed in my academic and professional journey, I realised that truly impactful digital products are not defined solely by their functionality, but by how effectively they serve and connect with users. This realisation has driven my passion to move towards a more human-centred approach to technology through User Experience Design.

During my undergraduate studies, I was introduced to Human-Computer Interaction, which helped me understand the importance of usability, accessibility, and thoughtful interaction design. This interest grew significantly during my final year project, "Smart Fitness Agent," where I developed an AI-powered system using computer vision to deliver personalised fitness recommendations. While the technical implementation was important, I became deeply engaged in ensuring that the system was intuitive, user-friendly, and meaningful for end users. This experience played a key role in shaping my decision to pursue advanced studies in UX.

Professionally, I have worked on a wide range of full-stack projects using technologies such as React, Next.js, and Node.js. In these roles, I consistently aimed to improve user interfaces and overall user experience. By refining design elements and optimising performance, I was able to significantly enhance mobile usability and reduce load times. These practical experiences reinforced my belief that combining technical development with user-centred design is essential for creating successful digital solutions.

I am particularly attracted to Birmingham City University's approach to teaching UX, which emphasises real-world application, collaboration, and innovation. The opportunity to engage with industry-led projects, develop a strong professional portfolio, and explore emerging technologies such as AI and immersive systems aligns perfectly with my interests and career aspirations. I am especially keen to deepen my knowledge in interaction design, user research, and usability testing, as well as to explore ethical considerations in modern digital design.

My long-term goal is to become a UX Engineer or Product Designer who can bridge the gap between development and design. I want to create digital experiences that are not only efficient and visually appealing but also inclusive, accessible, and meaningful. I believe that this programme will equip me with the knowledge, practical skills, and industry exposure required to achieve this vision.

I am highly motivated to contribute to the academic and collaborative environment at Birmingham City University. I am confident that this programme will play a crucial role in my professional growth, enabling me to refine my skills, expand my perspective, and make a meaningful impact in the field of User Experience Design.

Thank you for considering my application.
